UC San Diego Data Science B.S. | Python, SQL, Machine Learning, Backend Development

UC San Diego Data Science senior with experience in software development, data analytics, and machine learning. Passionate about transforming complex data into actionable insights that support strategic decision-making and improve products, operations, and user experiences. Experienced working across the full data workflow, from building scalable systems and analyzing datasets to communicating findings that drive real-world impact.

EDUCATION

University of California, San Diego | La Jolla, CA

Expected June 2027

Bachelor of Science in Data Science, Minor in Business Analytics

Honors: Provost Honors: Winter 2024, Spring 2025, Fall 2025, Winter 2026 | Top 8% Project Recognition - Ethical Data Visualization and Persuasive Analytics

Activities: DS3 Data Science Organization; Dance Coordinator, KOTX performance dance team with 100+ members

Relevant Coursework: Data Science, Machine Learning, Statistical Analysis, Data Visualization, Business Analytics, Database Systems, Programming, Experimental Design

TECHNICAL SKILLS

Languages: Python, Java, R, SQL, JavaScript, HTML/CSS

Data Science & ML: Pandas, NumPy, scikit-learn, regression, clustering, time-series analysis, EDA, hypothesis testing

AI / LLM Tools: OpenAI API, prompt design, LLM output evaluation, hallucination checks, GitHub Copilot, Cursor

Backend & Databases: FastAPI, Django REST Framework, PostgreSQL, Redis / Redisearch, REST APIs, Git, AWS

Visualization & Analytics: Tableau, Plotly, D3.js, A/B testing, geospatial analysis, interactive dashboards

EXPERIENCE

Juice Reel

June 2026 – Present

Data Science Intern

- Analyze event-level user session data to identify behavioral patterns related to engagement and retention.
- Design dashboards to monitor product metrics and communicate insights to business stakeholders.
- Explore user interaction data to identify opportunities for improving onboarding, feature adoption, and long-term retention.
- Collaborate with product and engineering teams to support data-driven product decisions.

Voderrn | San Francisco, CA

July 2025 – December 2025

Backend Development Intern

- Built and optimized backend services for an e-commerce platform using Python, asynchronous processing, PostgreSQL, and Redis-based search infrastructure.
- Improved shipping-rate calculation workflows by using Python asyncio to process concurrent shipment requests across multiple pickup locations.
- Developed a Redisearch-powered retrieval layer to reduce PostgreSQL read load and improve search responsiveness for end users.
- Contributed scalable backend utilities, including structured logging, error handling, and data-ingestion workflows to support reliable product and inventory operations.

KRON4 News | San Francisco, CA

July 2024 - Sept. 2024

Content Production & Data Analysis Intern

- Analyzed audience engagement data for LIVE! in the Bay and helped adjust content strategy, contributing to a 63% increase in audience engagement.
- Managed social media content for a daily lifestyle show, using performance trends to improve topic selection, timing, and audience targeting.
- Coordinated partnerships with Bay Area organizations for daily segments, promotions, and brand activations.

SELECTED TECHNICAL PROJECTS

Django Inventory Management API

Django REST Framework | REST APIs | Role-Based Access Control | Data Ingestion

GitHub: github.com/aceyq/voderrn-inventory-api

- Developed a RESTful inventory-management API to support product creation, updates, deletion, and listing workflows for an e-commerce use case.
- Implemented role-based access control for admin, seller, and customer user types, enabling permission-based product-management actions.
- Built backend utilities using Django management commands, structured logging, and error handling to support scalable data ingestion and maintainability.

Recipe Rating Predictor

Python, scikit-learn, EDA | Random Forest | Interactive Visualization

Website: aceyq.github.io/recipe-rating-predictor

- Built a machine learning regression model to predict recipe ratings using ingredient composition, preparation features, and recipe metadata.
- Performed exploratory data analysis on large-scale recipe datasets to identify seasonal patterns and ingredient-driven rating relationships.
- Tuned a Random Forest model within a scikit-learn pipeline and presented findings through an interactive project website.

LEADERSHIP & ACTIVITIES

DS3 - Data Science Student Society | UC San Diego

- Participate in data science workshops, technical events, and interdisciplinary learning opportunities focused on analytics, machine learning, and applied data projects.

KOTX Performance Dance Team | UC San Diego

Dance Coordinator

- Coordinate dance activities for a performance team with 100+ members, supporting scheduling, team communication, and event preparation.
